

Question: 07

- The range is set to 5 starting from 1; instead, it should be set to 7
- Currently, the program is not printing the corresponding day
- The program is not addressing the integer 6 and 7 which represent Saturday and Sunday.
- The indentation is a bit wrong
- In the `(value == 5)` block the `printf` statement should say "You entered a five" not "or you entered a five".
- For comment forward slashes should be used instead of back slashes
- After the "You entered one" statement a new line hasn't been printed.
